

blinkit 

India's Last Minute App

Quick Commerce Market is expected to grow from USD 7Bn to USD 35Bn by 2030 [\(Source\)](#).

Key Players: Blinkit, Swiggy Instamart, Zepto, BB Now, Flipkart Minutes, Amazon Now

Market Share (in terms of GOV) : [\(Source\)](#).

Value Proposition of Quick Commerce:

- **Initial Focus** : Quick delivery of daily essentials.
- **Customer Appeal** : Convenience and speed for urban consumers.
- **Expanded Offerings** : Now include electronics, home décor, beauty, office supplies, etc.
- **Impact** : Higher engagement, frequent orders, and increased average order values (AOVs).

Blinkit plans to setup 3000 dark stores by end of FY27, most of which will be in the top 10 cities of India. [\(Source\)](#).

Key Statistics of Blinkit:

GOV <i>(per store per day)</i>	AOV	Total no. of stores	GOV growth rate %	Avg Monthly Transacting users
₹9,43,000	₹669	2243	95.4%	27.2 Mn

GOV drivers for blinkit:

1. Incremental Growth in consumption:

- Categories like ice creams, festive items, and impulse buys are examples of incremental growth.
- Lack of convenient access would have left this demand unaddressed without quick delivery solutions.

2. Share shift from next day delivery e-commerce:

- Non-grocery products, like online-first brands (e.g., Perfora in oral care), experience quicker adoption via quick commerce.
- Faster delivery is pulling customers away from e-commerce platforms for certain products.

3. Share shift from mid-premium range modern retail:

- Quick commerce offers a wide selection and daily use premium items.
- Superior convenience and efficient home delivery provide a better experience than organized retail outlets.

The selection available to customers has increased 10-15x over the past twelve quarters, with up to **80,000** unique SKUs now offered in some locations (Delhi NCR). This expansion primarily includes categories **beyond traditional grocery**, such as **electronics, beauty, pet care, and toys**.

Blinkit currently operates in 172 cities across India, primarily focusing on Tier 1 and Tier 2 cities (expanding to Tier 3). These cities contribute significantly to the Gross Order Value (GOV), with urban consumers seeking convenience, speed, and access to a wide range of products. (Source)

Age	18 - 24	25 - 34	35+
Employment status	Student/Working	Working	Working
Location	Tier1/Teir2/Teir3	Teir1/Teir2	Teir1
Time Constraint	Minimum	High	High
Consumption	Low	High	High
Order frequency	2-3 times a week	3-4 times a week	1-2 times a week
AOV (INR)	300-400	600-800	1000+

Target Customer Segment

Omkar (30 Yrs)
Software Developer
Gurgaon

User Persona

1. Key Traits:

- Orders 3-4 times a week as per convenience.
- High time constraints due to work.
- Primarily focused on groceries, but open to non-FMCG.

2. Pain Points:

- Misses items which he could have bundled with previous order and save on delivery.

User Research insights

Frequent, low-spend orders : A significant portion of TCS places multiple orders per week (ranging from 2-3 to 10+ times), with a relatively modest spend per order (₹500–800), indicating a behavior pattern of ordering small quantities frequently, possibly driven by immediate needs or perishability concerns. (Source).

High reliance on convenience and urgency : Users primarily use Blinkit and other quick commerce platforms for the convenience of avoiding physical store visits and for fast delivery, especially for urgent or last-minute needs. 62% of urban shoppers rank delivery speed as their top priority. (Source).

Shreya (25 Yrs)
Project Manager
Bangalore

User Persona

1. Key Traits:

- Orders groceries frequently for her family. Prefers seamless, time-saving solutions for household needs.
- Less inclined to buy high value items.

2. Pain Points:

- Items per order are high so she has to take the pain of searching each and comparing with different brands.

As a Product Manager at the Growth Team of blinkit. The team is tasked with increasing the Gross Order Value (GOV) Throughput per store as that helps in improving the unit economics.

Assumptions: Unlimited Tech bandwidth available

Actors Involved

Customers, Delivery Partner,
Dark Store Team, Corporate
Team

Desired Outcomes

Business Outcome : Increase Gross Order Value (GOV) Throughput per store

Product Outcome : Increase items per order, Increase impression of non grocery items

Our Focus & opportunities

Business Outcome : Increase Gross Order Value (GOV) Throughput per store

Product Outcome : Increase items per order, Increase impression of non grocery items

Leverage 1P inventory model : recommend high-margin SKUs via SmartCart

JTBD Statement

When I open Blinkit app to order my groceries, I add items in my mind, But after ordering I remember some items are left and I have to buy them seperately from market/blinkit. Please help me optimize my orders, So I can save on delivery charges and have to take no pain of reorder/separate order.

What the real Problem is?

Despite Blinkit being widely used for groceries, many users are not maximizing their basket size, which limits the average order value (AOV). Frequent, smaller orders drive up costs for users without adding value, while Blinkit is missing opportunities to increase AOV.

Impact of solving the problem:

Items per order increase by 1

Avg item per order now = 4
Avg MRP = 0.9*669/4 = 150
New AOV at MRP = 5*150 = 750
New AOV = 1.1*750 = 825
23.33% increase

Users in our TCS = 0.9*0.5*27.2 = **12.24 Mn**
If each user shifts to Blinkit for non grocery items with one order of INR 1000 quarterly.
Total increase in GOV = INR 48,960 Mn
Total Stores in Tier 1 = 1570 (0.7*2243)
Increase in GOV per store per day = ~ INR 85,000

Problem Validation:

- 1. User Feedback:** Most respondents reported rarely ordering electronics or non-FMCG items. Instead, they mainly use Blinkit for grocery and essential purchases.
- 2. Survey Findings:**
 - a. 60% of users order groceries more than 3 times a week.
 - b. 36% forget some items while ordering and later have to buy individually.
 - c. 50% users rarely ordered electronics/non-FMCG items from Blinkit.
- 3. Key Insight:** There is a clear opportunity to increase basket size by making it easier more effective for users to bundle items together and promote electronics/non-FMCG items.

Possible Solutions - Ideation:

Blinkit Together

A group ordering feature that lets users collaborate on their purchases with friends, flat mates & family. Users can **share carts, split costs**.

(Inspired by Zomato & Swiggy)

Blinkit SmartCart Chat

An **AI-powered chat assistant** that creates **personalized shopping carts** for events, recipes, or routine needs. suggests relevant groceries and other items to **simplify the adding to cart process**.

can be integrted with mylist feature

Add on- healthy/better for you items only

Blinkit MyList

A list management tool that allows users to create and **save custom shopping lists & Suggest event based lists and**. organize items for lists, and the app provides suggestions for complementing and better products based on the list.

regular purchases, promotes event specials

Blinkit Beyond

A whole distinct section in the app dedicated to non-FMCG products like electronics, home essentials. keeps **non-FMCG items separate from hyper quick deliveries** while offering fast, efficient service for these products.

Complete separate section

Prioritization

RICE(Reach, Impact, Confidence, Effort) framework can be used to Prioritize the features but, from our assumptions we have unlimited tech bandwidth and from user research we are targeting a specific customer segment, hence Effort and Reach can be eliminated from the framework for now.

Feature	Impact Score (I)	Confidence Score (C)	Rationale	Final Score (I*C)
Blinkit Together	7	5	Increases AOV by encouraging shared, larger orders with friends/family, opportunities for cross-sell increases.	35
Blinkit SmartCart Chat (Selected Feature)	8	7	solves missing items by creating tailored carts, improving user satisfaction. Can be integrated with MyLists as well in Future Improving cross selling, sale of non-Grocery	56
Blinkit MyList	6	6	user retention increased through personalized lists, encouraging repeat purchases.	36
Blinkit Beyond	8	5	operational efficiency is improved by separating non-FMCG from quick commerce. validated by users needs to a proper strategic roadmap to start	40

User Flow & Wireframes - Blinkit SmartCart

Feature will be used to create end-to-end carts based on needs, suggest better options (brands, healthy).

Floating icon for smartcart
When clicked a popup chat opens

System Design - Blinkit SmartCart

Moving Forward

The feature of MyList can be integrated to improve efficiency
Can become full fledged AI Shopping assistant, new add ons
like restock reminder for items, activity based suggestions

Key Metrics

NSM (North Star Metric)	1. GOV per Store Per Day (in INR) 2. Monthly %Gr - GOV per store
L1 (Primary Goal)	1. Average Order Value (AOV) 2. Sales of Non-Grocery items - Monthly (% Gr)
L2 (NSM supporting Metric)	No. of items per order

Retention Metrics

Primary Metric: **Repeat SmartCart Usage** - Percentage of users who use SmartCart more than once.
Secondary metric: **SmartCart Engagement Rate** - Number of users engaging with SmartCart per month.

Conversion Metrics

Primary metric: **SmartCart to Checkout Conversion** - Percentage of users converting from SmartCart to actual orders.

Pitfalls & Mitigations

Pitfall - 1 (Frustration with non-FMCG goods)

Users may feel frustrated if they sense a push to purchase non-FMCG items that detract from the grocery experience.

Mitigation

model must analyze users individually, who show more interest in non-FMCG products (e.g., past buyers of electronics) and target them more aggressively while keeping non-FMCG promotion minimal for others.

Pitfall - 2 (Possible Negative impact on AOV)

If the SmartCart promotes primarily lower-cost or budget-friendly items, it could decrease the AOV, counteracting the intended benefit.

Mitigation

Need to train the model properly to balance the recommendations between low-cost staples and premium products, Add ons like - healthy/better for you items only
